LEGISLATIVE – LAND DEVELOPMENT CODE AMENDMENT – ARTICLE V, SECTION 5.05.00 - FLOODPLAIN - Chairperson Greene stated this is a request to recommend approval of the amendment to the Apopka Code of Ordinances, Part III, Land Development Code, Article V, Section 5.05.00 – Floodplains; and recommend adoption of the Technical Amendments to the Florida Building Code.

Staff Presentation: Richard Earp, P.E., City Engineer, stated this is a request to recommend approval of the amendment to the Apopka Code of Ordinances, Part III, Land Development Code, Article V, Section 5.05.00 – Floodplains; and recommend adoption of the Technical Amendments to the Florida Building Code. On January 5, 2018, the City of Apopka was formally notified by the State of Florida, Division of Emergency Management that the Florida Building Code 6th Edition, became effective on January 1, 2018. In order for the City to maintain compliance with the minimum requirements of the Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP), revisions to the City's Floodplain Ordinance and associated Floodplain elements of the Land Development Code are required.

This year, the Florida Division of Emergency Management (FDEM) collaborated with the City Engineer/Floodplain Administrator to develop code revisions. This request includes all FDEM and FEMA required revisions.

Only one proposed revision is in excess of minimum FDEM and FEMA requirements. As a minimum, FEMA requires that the Finished Floor Elevation (FFE) of all new and substantially improved structures be constructed at least 1-foot above the FEMA 100-year Floodplain Elevation. This proposed code revision requires 2-feet above the FEMA 100-year Floodplain Elevation. The FFE increase above the minimum provides both additional protection from flooding, and additional FEMA Community Rating System (CRS) credits. CRS credits are used by FEMA to calculate the amount of Floodplain Insurance Policy discount policy holders receive. FEMA's 2017 audit of the City's CRS program scored the City in Class 8. CRS Class 8 Communities enjoy a 10% discount on flood insurance policies for structures within the 100-year Special Flood Hazard Area and 5% discount on policies for structures outside of the 100-year Special Flood Hazard Area.

In response to a question by Ms. Laurendeau, Mr. Earp stated that the new changes will affect future projects.

In response to a question by Mr. Sprinkle, Mr. Earp the 100 year calculation is based on one percent of rain fall in any given year.

Chairperson Greene opened the meeting for public hearing. With no one wishing to speak, Chairperson Greene closed the public hearing.

Motion: **Linda Laurendeau made a motion to recommend approval of the amendment to the Apopka Code of Ordinances, Part III, Land Development Code, Article V, Section 5.05.00 – Floodplains; and recommend adoption of the Technical Amendments to the Florida Building Code. Motion seconded by Butch Stanley. Aye votes were cast by James Greene, Linda Laurendeau, Robert Ryan, John Sprinkle, and Butch Stanley (5-0). (Vote taken by poll.)**

LEGISLATIVE – COMPREHENSIVE PLAN AMENDMENT – CAPITAL IMPROVEMENTS ELEMENT - Chairperson Greene stated this is a request to find the proposed amendment of the Apopka Five-Year Capital Improvements Plan consistent with the Apopka Comprehensive Plan; and recommend approval of the Five-Year Capital Improvements Plan amendment and the incorporation into the Capital Improvements Element of the Comprehensive Plan.

Staff Presentation: David Moon, AICP, Planning Manager, stated this is a request to find the proposed amendment of the Apopka Five-Year Capital Improvements Plan consistent with the Apopka Comprehensive Plan; and recommend approval of the Five-Year Capital Improvements Plan amendment and the incorporation into the Capital Improvements Element of the Comprehensive Plan. The City desires to conduct recreation improvements at Kit Land Nelson Park and at Northwest Recreation Complex to accommodate a need for additional and improved playground equipment and facilities for youth. To fund these recreation improvements, the City proposes to apply for available grant funds sponsored by the Florida Department of Environmental Project.

Eligibility requirements for the grant program require that the proposed recreation improvement must be recognized within the City's capital improvement program (CIP) established in the Comprehensive

Plan. Further, the City must proceed expeditiously at this time to meet grant application deadlines. Hence, the proposed update to the five-year CIP of the Comprehensive Plan at this time only addresses the new recreation improvements at Kit Land Nelson Park and at Northwest Recreation Complex.

After the Fiscal year 2018-19 budget has been approved by City Council, staff will conduct an annual update of the five-year CIP to address necessary to meet accepted levels of service (LOS), to maintain and repair failing facilities, and to provide additional infrastructure facilities and roads to meet demands generated by new growth and development. Typically, the five-year CIP within the Comprehensive Plan addresses the infrastructure needs related to transportation, water, sewer, reclaimed water, stormwater management, and recreation.

Exhibit 'A' of this report includes the updated CIP to be incorporated as Appendix 7-1 of the Capital Improvements Element. The proposed CIP changes (additions) are included in the 'General Fund' and 'FDEP Grant Fund' sections of the Recreation CIP (shown in Exhibit 'A'). Funds appearing in the 'General Fun' serve as the local government match requirement per the conditions of the FDEP grant program.

Legislative changes in 2011 to Chapter 163, Florida Statutes allow local governments to update their five-year CIP by ordinance, and is not considered a comprehensive plan policy amendment. Therefore, incorporation of the updated CIP into the Capital Improvements Element does not require transmittal to the Florida Department of Economic Opportunity for state agency review.

Chairperson Greene opened the meeting for public hearing. With no one wishing to speak, Chairperson Greene closed the public hearing.

Motion: Linda Laurendeau made a motion to find the proposed amendment of the Apopka Five-Year Capital Improvements Plan consistent with the Apopka Comprehensive Plan; and recommend approval of the Five-Year Capital Improvements Plan amendment and the incorporation into the Capital Improvements Element of the Comprehensive Plan. Motion seconded by Robert Ryan. Aye votes were cast by James Greene, Linda Laurendeau, Robert Ryan, John Sprinkle, and Butch Stanley (5-0). (Vote taken by poll.)

QUASI-JUDICIAL – CHANGE OF ZONING - PLANNED UNIT DEVELOPMENT MASTER PLAN/PRELIMINARY DEVELOPMENT PLAN – MID-FLORIDA LOGISTICS PARK -

Chairperson Greene stated this is a request to find the proposed rezoning to Planned Unit Development (PUD), PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan consistent with the Comprehensive Plan and Land Development Code; and recommend approval of the rezoning from I-1 (Restricted Industrial), Mixed-EC, R-1AA (Residential Single-Family), AG (Agricultural), and A-1 (ZIP) to PUD (Planned Unit Development); recommend approval of the PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan based on the findings and facts presented in the staff report and exhibits, and subject to City Council approving a development agreement for the property owned by Mid-Florida Freezer Warehouses LTD and Eagles Landing at Ocoee, LLC and located on the west side of SR 429, south of General Electric Road, east of Hermit Smith Road.

Chairperson Greene asked if there were any affected parties in attendance that wished to speak.

Mark Sessions requested affected party status as he owns property adjacent to the proposed project.

Erin Bennett, stated he represents The Coca-Cola Company that owns property adjacent to the proposed project and requested affected party status.

The Planning Commission unanimously agreed that Mr. Sessions and Mr. Bennet, as a representative for The Coca-Cola Company, were affected parties.

Chairperson Greene asked if the Commission members had any ex parte communications to divulge regarding this item. No ex parte communications occurred.

Staff Presentation: David Moon, AICP, Planning Manager, stated this is a request to find the proposed rezoning to Planned Unit Development (PUD), PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan consistent with the Comprehensive Plan and Land Development Code; and recommend approval of the rezoning from I-1 (Restricted Industrial), Mixed-EC, R-1AA (Residential Single-Family), AG (Agricultural), and A-1 (ZIP) to PUD (Planned Unit Development); recommend approval of the PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan based on the findings and facts presented in the staff report and exhibits, and subject to City Council approving a development agreement for the property owned by Mid-Florida Freezer Warehouses LTD and Eagles Landing at Ocoee, LLC and located on the west side of SR 429, south of General Electric Road, east of Hermit Smith Road. The engineer is Dave Schmitt Engineering, Inc., c/o Bryan Gaines, AICP. The existing use is vacant land. The proposed use is 2,406,095 square feet of industrial buildings to be developed in multiple phases. The current future land use is Industrial, Mixed-Use, Agriculture. The proposed future land use is Industrial and is being taken to City Council for second reading on September 19, 2018. The current zoning is I-1 (Restricted Industrial), Mixed-EC, R-1AA (Residential Single-Family), AG (Agriculture), and A-1 (ZIP). The proposed zoning is Planned Unit Development (PUD). The tract size is 186.03 +/- acres.

The subject property is approximately 188.893 acres in size and is zoned I-1 (Restricted Industrial District), Mixed-EC, R-1AA (Residential Single-Family District), AG (Agriculture District), and A-1 (ZIP) and has a future land use designation of Industrial. The subject property is located west of SR 429, south of General Electric Road and east of Hermit Smith Road. The proposed change of zoning to PUD (Planned Unit Development) is being requested by the prospective developer, who proposes to construct a subdivision consisting of five industrial warehouse buildings totaling 2,406,095 on the property.

A development agreement is required to address off-site infrastructure obligations placed on either the City or the Developer, land dedications, vacate of city right-of-way, timing of infrastructure, and special design or use standards. City staff and the city attorney's office has worked with the applicant and its attorney to prepare the development agreement. At this time it is not complete, but is anticipated to be ready for City Council review and action at the second public hearing for the PUD zoning. If the development agreement is not ready for the October 17 City Council meeting, City staff will request a continuation of the second hearing to the November 7 City Council meeting date.

The PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan proposes a subdivision consisting of five industrial warehouse buildings totaling 2,406,095 square feet. Access to the site is proposed an ingress/egress point on Hermit Smith Road, two ingress/egress points on General Electric Road, and a yet to be constructed road that is dedicated to the public that is referred to as Fern Industrial Drive, which is proposed to be constructed in a north-south direction. In addition, three railroad spurs are proposed to lead into buildings 1A and 1B, 2, and 3. The railroad spurs will be located along the

right-of-way of Fern Industrial Drive. Parking will be provided on each lot, and will be owned and maintained by each property owner.

Four Stormwater retention areas are proposed on site. Pond A (dry retention) is proposed south of Building 3, Pond B is proposed east of Building 1A and 1B and adjacent to SR 429, and Ponds C1 (dry retention) and C2 (wet detention) are proposed south and west of Building 5.

An unimproved platted right-of-way known as Peterson Road bisects the property in an east to west direction. This right-of-way is proposed to be vacated when the property is platted, and the right-of-way of Peterson Road will be relocated to the south to allow access to the property owners located to the south of the PUD. The proposed relocation of the Peterson Road right-of-way is shown on the PUD Master Plan in a “J” shaped configuration that extends from north to south and east to west. The new right-of-way of Peterson Road is proposed at 55-feet in width in the north/south direction. Adjacent to the east of the new Peterson Road right-of-way, the Central Florida Expressway Authority has 25-foot perpetual ingress/egress easement that allows access to the property to the south. This easement will not be included in the north/south portion of the right of way. 80-feet of right-of-way is proposed in the east/west direction.

In order accommodated the subdivision plan and site plan, a small area of right-of-way in the northwestern corner of the site that is referred to as Fronds Road must also be vacated.

The applicant is requesting five deviations to the City’s required development standards. For a PUD Master Plan, a deviation from the City’s Land Development Code (LDC) does not represent a variance but a development standard or zoning condition unique to and approved as part of the Planned Unit Development zoning. PUD’s are required to satisfy the requirements of the Land Development Code unless the City Council finds that, based on substantial evidence, a proposed alternative development guideline is adequate to protect to the public health safety, and welfare. Any deviations must be consistent with the policies of the Comprehensive Plan.

1. LDC, Section 6.03.02.A. Number of parking spaces required (Wholesale, industrial, manufacture, processing or assembly uses) - 2 spaces per 1,000 square feet of gross floor area up to 150,000 square feet, plus 1 space per vehicle operating from premises or 1 space per 2 employees. 1 space per 1,000 square feet over 150,000 square feet of gross floor area.

The applicant is proposing 0.89 parking spaces per 1,000 square feet of gross floor area.

The following justification has been provided: “The ITE Parking Generation Manual, 4th Edition, 85th percentile parking requirement for warehouse use is 0.81 spaces per 1,000 square feet of gross floor area.”

2. LDC, Section 2.02.01.A. - Maximum building height for all zoning districts is 35-feet.

The applicant is proposing a maximum building height of 55-feet within the PUD.

The following justification has been provided: “The modern warehouses require 36-feet to 45-feet of clear space under roof to accommodate automated materials handling equipment and maximize storage.”

3. LDC, Section 2.02.15.F. Yard requirements - Front yard – 25-feet, side yard – 10-feet, Yards adjacent to road right-of-ways shall be a minimum of 25-feet, Rear Yard – 10-feet (30-feet adjacent to residential)

The applicant is proposing 15-foot setback on General Electric Road, Hermit Smith Road to main entrance, 0-feet to 10-feet adjacent to SR 429, 10-feet to 25-feet adjacent to Peterson Road, 10-feet adjacent to Fern Industrial Drive.

The following justification has been provided: “The northwestern portion of the site is constrained by the encroachment of General Electric Road. SR 429 has 300-feet of right-of-way, 6 lanes, and provides a 20-foot high barrier to adjacent property to the east.”

4. LDC, Section 2.02.01.b(8a) – Roof top equipment shall be completely screened from adjacent properties and rights-of-way to the maximum extent possible.

The applicant is proposing roof top equipment shall be screened from view from adjacent property lines and public right-of-way, with the exception of SR 429 due to the large elevation change of the roadway and the finished floor elevation of the building. SR 429 is at an elevation of 135-feet, approximately 20-feet above the finished floor height of Building 2. Screening shall be reviewed to be in conformance by the subdivision president and the City of Apopka. Screening shall be reviewed through a sight line document from the nearest adjacent property line and/or from the center line of the public right-of-way. The eye line shall be from the typical height of a person driving an automobile.

The following justification has been provided: “All buildings will have a site line evaluation to confirm that rooftop equipment will not be visible from adjacent properties and right-of-way.”

5. LDC, Section 6.02.08.B.2 – All subdivisions are required to have four-foot wide concrete sidewalks on both sides of all local and minor collector streets.

The applicant is proposing to construct a sidewalk along only one side of Fern Industrial Drive.

The following justification has been provided: “We are requesting that we do not place a sidewalk on the east side of the right-of-way proximate to the rail spurs. The pedestrian access plan provided on Sheet 6 of the PUD Master Plan shows a network of pedestrian facilities serving the entire site. The sidewalk on the west side of Fern Industrial is the spine connecting the southern end of the site with General Electric Road. All buildings are connected to this north/south spine and the appropriate crosswalks are provided when needed. We (BlueScope) remain concerned that placement of a sidewalk will not increase the pedestrian connectivity over the current plan but will put pedestrians in close proximity to the rail spurs to the east of Fern Industrial serving the site. The benefit of the additional sidewalk does not, in our opinion, warrant the risk of inadvertent interaction of pedestrians and rail vehicles.”

Access to the site is provided from General Electric Road and Hermit Smith Road. Peterson Road is also a future access point for this project as well as for properties to the south of the Mid-Florida Logistics Park site. Peterson Road and Fronds Road are both proposed to be vacated at the request of

the applicant and property owner. Peterson Road will be re-aligned to follow the south project/property line and intersect with Fern Industrial Drive. The vacated road right-of-way will become part of the development site, making it more compact and contiguous. Peterson Road access will serve as a future secondary access for emergency response. The proposed Peterson Road alignment will also create connection to Peterson Road east of SR 429, allowing residents of the proposed Avian Pointe residential development to reach the Logistics Park. The Peterson Road connection between the east and west side of SR 429 also allows another road connection besides using West Orange Avenue and Binion Road, thus allowing traffic to distribute over more routes.

A transportation impact analysis (TIA) was conducted for this project to assess its impacts on the surrounding roadway segments and intersections within a one-mile radius of the project per the City's adopted TIA methodology. Included in the analysis were segments of US 441, General Electric Road, Binion Road, Hermit Smith Road and Hogshead Road. Intersections analyzed were General Electric Road and Orange Avenue, Hermit Smith Road and General Electric Road, Hermit Smith Road and US 441, SR 429 Connector Road and US 441, Orange Avenue and US 441, Plymouth Sorrento Road and US 441, Boy Scout Boulevard and US 441, General Electric Road and Site Access, and Hermit Smith Road and Site Access. Peterson Road connection requires additional right-of-way east of SR 429. In exchange for the City vacating Fronds Road and Peterson Road, Mid-Florida Freezer will be obligated to donate an additional 30-foot width of land along Peterson Road, east of SR 429, to create a 50-foot wide right-of-way.

The project will generate 3,444 daily trips and 246 P.M. Peak Hour trips. It is estimated that 20% of the total traffic generated by this project will be truck traffic. The nature of the land use supports the assumption that most of the truck traffic will leave the site and access SR 429 from US 441 and SR 429 Connector Road.

The addition of project trips to the study roadways will not cause the Level of Service (LOS) to fall below the City's adopted LOS standard. The addition of project traffic to the intersection of Hermit Smith Road and US 441 will cause the intersection to fail. The applicant is required to design and construct a dedicated right turn lane on Hermit Smith Road to allow for safe access to US 441. The addition of project traffic to the other study intersections is not project to cause failures in the future.

The tenants of the Mid-Florida Logistics Park are unknown at this time, so trip generation is based on the best information currently available; however, it is possible that tenants occupying space at Mid-Florida Logistics Park will exceed the trip generation used to conduct the analysis. As the site develops and becomes occupied, the applicant must reassess the trip generation. If it exceeds the projected trip generation used in the analysis, an updated study is required and additional mitigation for roadway and intersection failures caused by the project traffic.

The PUD recommendations are that the zoning classification of the following described property be designated as Planned Unit Development (PUD), as defined in the Apopka Land Development Code, and with the following Master Plan provisions subject to the following zoning provisions:

- A. The uses permitted within the PUD district shall be those described in C below.
- B. Terms of Expiration for this PUD shall be as follows:

If a Final Development Plan associated with the PUD district has not been approved by the City within three years, and site development has not commenced within four years after approval of these Master Plan provisions, the approval of the Master Plan provisions will expire. At such time, the City Council may:

1. Permit a single six-month extension for submittal of the required Final Development Plan;
2. Allow the PUD zoning designation to remain on the property pending resubmittal of new Master Plan provisions and any conditions of approval; or
3. Rezone the property to a more appropriate zoning classification.

C. Zoning Standards

1. Permitted Uses:

- (a) All permitted uses allowed under I-1 zoning district;
- (b) The uses allowed by the “Developer’s Agreement for Development of Copart, Inc. Apopka Property,” as recorded as document number 20160275220 within the official records of Orange County, Florida, shall be available uses within this PUD if the Copart Developer’s Agreement is terminated with the mutual consent of City Council and the property owner subject to the Copart Developer’s Agreement;
- (c) Long-term outdoor vehicle (bus, car, cab, and truck) storage and terminal use is permitted within the PUD as an accessory use if said vehicle parking is associated with an enclosed building having a minimum floor area of 10,000 square feet and located within the same Lot or abutting lots. All vehicles stored outdoors must be operable.
- (d) Prohibited Use: Flea markets; day-care centers except when provided solely for on-site employees; churches, public or private schools (k-12th grade) except when located within a stand-alone building; community residential homes; All prohibited uses for the I-1 zoning district.
- (e) Special Exceptions: As set forth by the I-1 zoning district except if listed as a permitted or prohibited uses above.

The proposed use of the property is consistent with the proposed Industrial Future Land Use designation and is consistent with the Land Development Code.

Pursuant to Section 7 of the Joint Planning Area agreement, notification to Orange County was provided on July 18, 2018.

The Development Review Committee finds the proposed rezoning to Planned Unit Development (PUD), PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan consistent with the Comprehensive Plan and Land Development Code and recommends approval of the Mid-Florida Logistics Park PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan.

Staff recommended the Planning Commission find the proposed zoning and PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan consistent with the Comprehensive Plan and Land Development Code; and unanimously recommended approval of the rezoning of the subject parcel from I-1 (Restricted Industrial District), Mixed-EC, R-1AA (Residential Single-Family District), AG (Agriculture District), and A-1 (ZIP) to PUD (Planned Unit Development), and approval of the PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan based on the findings and facts presented in the staff report and exhibits, subject to City Council approving a Development Agreement.

This item is considered quasi-judicial. The staff report and its findings are to be incorporated into and made a part of the minutes of this meeting.

Bryan Gaines, Dave Schmitt Engineering, Inc., 12301 Lake Underhill Road, Orlando, stated that he was available to answer any questions and their attorney, Julie Kendig, was also available to answer any questions.

Mark Sessions, St. Cloud, expressed his support of the proposed project. He stated that he owns a parcel of land that is land locked south of the subject property. He requested that the developer extend Peterson Road to allow access to his property.

Julie Kendig, GreenbergTraurig, 450 South Orange Avenue, Suite 650, Orlando, stated that Mr. Sessions property has been land locked for many years. Her client is under no obligation to provide access to Mr. Sessions property.

In response to a question by Mr. Sprinkle, Patrick Brackin, City Attorney, stated that extending Peterson Road to allow access to the properties located south of the proposed project was not included in the plan and staff has not been asked to review that access. The City is not responsible for providing access when access is not already there. This is an issue between the property owners. Based on the facts presented the City is under no obligation to provide access.

James Hitt, FRA-RA, Community Development Director, advised Mr. Sessions that there may be an option to open access on the south side of his property and he would provide Mr. Sessions with contact information.

Chairperson Greene opened the meeting for public hearing. With no one wishing to speak, Chairperson Greene closed the public hearing.

Motion: John Sprinkle made a motion to this is a request to find the proposed rezoning to Planned Unit Development (PUD), PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan consistent with the Comprehensive Plan and Land Development Code; and recommend approval of the rezoning from I-1 (Restricted Industrial), Mixed-EC, R-1AA (Residential Single-Family), AG (Agricultural), and A-1 (ZIP) to PUD (Planned Unit Development); recommend approval of the PUD Master Plan/Preliminary Development Plan/Preliminary Site Plan based on the findings and facts presented in the staff report and exhibits, and subject to City Council approving a development agreement for the property owned by Mid-Florida Freezer Warehouses LTD and Eagles Landing at Ocoee, LLC and located on the west side of SR 429, south of General Electric Road, east of Hermit Smith

Road. Motion seconded by Linda Laurendeau. Aye votes were cast by Aye votes were cast by James Greene, Linda Laurendeau, Robert Ryan, John Sprinkle, and Butch Stanley (5-0). (Vote taken by poll.)

QUASI-JUDICIAL – FINAL DEVELOPMENT PLAN – APOPKA MEDICAL OFFICE - Chairperson Greene stated this is a request to find the AutoZone Store Final Development Plan consistent with the Land Development Code and Comprehensive Plan; and recommend approval of Final Development Plan, subject to the Condition of Approval and the findings of the staff report for the property owned by Urgent Care Developers of Apopka, LLC c/o Tim Burrill, and located at 1520 West Orange Blossom Trail.

Chairperson Greene asked if there were any affected parties in attendance that wished to speak. No one spoke.

Chairperson Greene asked if the Commission members had any ex parte communications to divulge regarding this item. No ex parte communications occurred.

Staff Presentation: Jean Sanchez, Planner II, stated this is a request to find the Apopka Medical Office Final Development Plan consistent with the Land Development Code and Comprehensive Plan; and recommend approval of Final Development Plan, subject to the Condition of Approval and the findings of the staff report for the property owned by Urgent Care Developers of Apopka, LLC c/o Tim Burrill, and located at 1520 West Orange Blossom Trail. The engineer is Klima Weeks Civil Engineering, Inc., c/o Selby G. Weeks, P.E. The future land use is Commercial and the zoning is C-1 (Retail Commercial) the existing use is vacant land and the proposed use is a 5,285 sq. ft. medical office. The floor area ratio is 0.03. The tract size is 4.48 +/- acres.

This is a request to approve the Apopka Medical Office Building – Final Development Plan/Site Plan that includes a proposed building floor area of 5,285 square feet for medical office use. This project on Lot 1 will use 0.57 acre. Lot 2 is intended for future commercial use with a total of 3.92 acres. The entire parcel with total size of 4.48 acres is intended to be platted prior to the completion of the medical office building. A Certificate of Occupancy for this project will not be issued until a plat is approved. The stormwater pond may later be incorporated into a master stormwater pond jointly used by the entire development.

A total of 26 parking spaces will be provided as required by Code, two of which are reserved as a handicap accessible parking spaces.

This project will have right-in-right-out only access to U.S. 441/W Orange Blossom Trail. Exiting traffic that wants to travel north on U.S. 441/W Orange Blossom trail will be required to make a U-turn at the U.S. 441/W Orange Blossom Trail and Errol Parkway signalized intersection.

Projects that generate less than 400 daily trips do not require the submittal of a Traffic Impact Analysis (TIA). The applicant was advised at DRC that when the remainder of the parcel is brought forward for development, a TIA will be required to assess the total site impacts.

The height of the proposed building is 25 feet, below the maximum allowable height of 35 feet. Staff has found the proposed building façade elevations to be in accordance with the City's Development Design Guidelines.

The stormwater management system includes an on-site retention area, on the southern portion of the site. The stormwater pond design meets the City's Land Development Code requirements based on this project but may be amended at the time of Lot 2 development.

As part of the development plan approval, blue cypress, bottle brush and crepe myrtle trees will embellish the 10-foot wide landscaping buffer adjacent to U.S. Highway 441. Live oaks are located around the parking landscaped islands and blue cypress trees surround the building. The planting materials and irrigation system design are consistent with the water-efficient landscape standards set forth in Ordinance No. 2069.

CLEARING AND SITE PREPARATION NOTES:

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROPER INSTALLATION OF THE EROSION CONTROL DEVICES, AS SHOWN ON THE CONSTRUCTION PLANS, PRIOR TO ANY SITE CLEARING AND/OR DEMOLITION. REFER TO THE "EROSION CONTROL NOTES" SECTION CONTAINED HEREIN FOR ADDITIONAL REQUIREMENTS. NOT ALL NOTES MAY BE APPLICABLE.
2. PRIOR TO ANY SITE CLEARING, ALL TREES SHOWN TO REMAIN, AS INDICATED ON THE CONSTRUCTION PLANS, SHALL BE PROTECTED IN ACCORDANCE WITH LOCAL TREE ORDINANCES AND DETAILS CONTAINED IN THESE PLANS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO MAINTAIN THESE TREES IN GOOD CONDITION. NO TREE(S) SHOWN TO REMAIN SHALL BE REMOVED WITHOUT WRITTEN APPROVAL FROM THE OWNER AND THE LOCAL AGENCY HAVING JURISDICTION OVER THESE ACTIVITIES.
3. THE CONTRACTOR SHALL CLEAR AND GRUB ONLY THOSE PORTIONS OF THE SITE NECESSARY FOR CONSTRUCTION. ALL DISTURBED AREAS MUST BE SEDED, MULCHED, SOODED OR PLANTED WITH OTHER APPROVED LANDSCAPE MATERIAL IMMEDIATELY FOLLOWING CONSTRUCTION.
4. THE TOP 4" TO 6" OF GROUND REMOVED DURING CLEARING AND GRUBBING ACTIVITIES SHALL BE STOCKPILED, TO BE USED FOR LANDSCAPING PURPOSES, UNLESS OTHERWISE DIRECTED BY THE OWNER. REMAINING EARTHWORK THAT RESULTS FROM CLEARING AND GRUBBING OR SITE EXCAVATION IS TO BE UTILIZED ON-SITE. PROVIDED THE MATERIAL IS DEEMED SATISFACTORY BY THE OWNER'S SOILS TESTING COMPANY. EXCESS MATERIAL IS TO EITHER BE STOCKPILED ON-SITE, AS DIRECTED BY THE OWNER OR OWNER'S ENGINEER, OR REMOVED FROM THE SITE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ACQUIRING ANY PERMITS THAT ARE NECESSARY FOR REMOVING ANY EXCESS MATERIAL FROM THE SITE.
5. ALL EXISTING DEBRIS (ABOVE OR BELOW GROUND), CONSTRUCTION DEBRIS AND OTHER WASTE MATERIAL SHALL BE DISPOSED OF OFF-SITE BY THE CONTRACTOR, IN ACCORDANCE WITH APPLICABLE REGULATORY AGENCY REQUIREMENTS.
6. THE CONTRACTOR IS TO PREPARE THE SITE IN ACCORDANCE WITH THE SOILS REPORT, COPIES OF WHICH ARE AVAILABLE THROUGH THE OWNER OR SOILS TESTING COMPANY DIRECTLY.

EROSION AND SILTATION CONTROL:

1. GENERAL: ALL EROSION AND SILTATION CONTROL METHODS SHALL BE IMPLEMENTED PRIOR TO THE START OF CONSTRUCTION. DURING CONSTRUCTION, CLEARED AREAS SHALL BE COVERED BY MULCHES SUCH AS STRAW, HAY AND FILTER FABRIC. ALL STORM SEWER INLETS IN THE VICINITY OF THE PROJECT SHALL BE PROTECTED BY SEDIMENT TRAPS OR HAY BALES. THESE SHALL BE MAINTAINED AND MOVED DURING THE CONSTRUCTION PROCESS TO MAINTAIN DOWNSTREAM SITUATION. WHEN CONSTRUCTION IS COMPLETED, DETENTION AREAS WILL BE RESHED, CLEANED OF SILT, MUD AND DEBRIS, AND RE-SOODED TO PROPERLY DETAIN THE INTENDED STORM QUANTITIES.
2. PROTECTION AND STABILIZATION OF ON-SITE SOIL STOCKPILES: ALL MATERIAL STOCKPILES SHALL BE PROTECTED AT ALL TIMES BY ON-SITE DRAINAGE CONTROLS THAT PREVENT EROSION OF THE STOCKPILED MATERIAL. CONTROL OF DUST FROM SUCH STOCKPILES MAY BE REQUIRED, DEPENDING UPON THEIR LOCATION AND THE EXPECTED LENGTH OF TIME THE STOCKPILES WILL BE PRESENT. IN NO CASE SHALL ANY UNSTOCKPILED MATERIAL REMAIN MORE THAN THIRTY (30) CALENDAR DAYS AFTER SUBSTANTIAL PROJECT COMPLETION.
3. PROTECTION OF EXISTING STORM SEWER SYSTEMS: DURING CONSTRUCTION, ALL STORM SEWER INLETS IN THE VICINITY OF THE PROJECT SHALL BE PROTECTED BY SEDIMENT TRAPS SUCH AS SECURED HAY BALES, SOO, STONE, ETC., WHICH SHALL BE MAINTAINED AND MOVED AS REQUIRED BY CONSTRUCTION PROGRESS, AND WHICH MUST BE APPROVED BY THE ENGINEER BEFORE INSTALLATION.
4. SEDIMENT BARRIERS AND SEDIMENT TRAPPING MEASURES: PERIMETER BARRIERS, BARRIERS, VEGETATIVE BARRIERS AND OTHER MEASURES INTENDED TO TRAP SEDIMENT AND/OR PREVENT THE TRANSPORT OF SEDIMENT ONTO ADJACENT PROPERTIES, OR INTO EXISTING BODIES OF WATER, MUST BE INSTALLED, CONSTRUCTED OR, IN THE CASE OF VEGETATIVE BARRIERS, PROTECTED FROM DISTURBANCE, AS A FIRST STEP IN THE LAND ALTERATION PROCESS. SUCH SYSTEMS SHALL BE FULLY OPERATIVE BEFORE ANY OTHER DISTURBANCE OF THE SITE BEGINS. EARTHEN STRUCTURES, INCLUDING BUT NOT LIMITED TO, BERM, EARTH FILTERS, DAMS, OR DICES SHALL BE STABILIZED AND PROTECTED FROM DAMAGE OR EROSION WITHIN ONE WEEK OF INSTALLATION.
5. SHALES, DITCHES AND CHANNELS: CHANNELS LEADING FROM THE SITE SHALL BE SOODED WITH ASCENDING BANKS WITHIN THREE (3) DAYS OF EXCAVATION.
6. UNDERGROUND UTILITY CONSTRUCTION: UNDERGROUND UTILITY LINES AND OTHER STRUCTURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE FOLLOWING STANDARDS:
 - A. NO MORE THAN 500 LINEAR FEET OF TRENCH SHALL BE OPEN AT ANY ONE TIME.
 - B. EXCAVATED MATERIAL SHALL BE CAST TO THE UPHILL SIDE OF TRENCHES AS LONG AS SAFETY AND SPACE CONSIDERATION ALLOW. TRENCH MATERIAL SHALL NOT BE CAST INTO (OR ONTO THE SLOPE OF) ANY STREAM, CHANNEL, ROAD, DITCH OR WATERWAY.

EROSION CONTROL MEASURES SHOWN HEREIN ARE THE RECOMMENDED MINIMUM EROSION CONTROL MEASURES. CONTRACTOR IS RESPONSIBLE TO IMPLEMENT ALL EROSION CONTROL MEASURES AND TO MODIFY AS NECESSARY TO ENSURE COMPLIANCE WITH THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES).

7. ALL EROSION AND SILTATION CONTROL DEVICES SHALL BE REGULARLY INSPECTED AND MAINTAINED, (ESPECIALLY AFTER EACH RAINFALL) AND WILL BE CLEANED OUT AND/OR REPAIRED AS REQUIRED.
8. DISTURBED AREAS AND AREAS USED FOR STORAGE OF MATERIALS THAT ARE EXPOSED TO RAIN SHALL BE INSPECTED FOR EVIDENCE OF, OR THE POTENTIAL FOR, POLLUTANTS ENTERING THE STORMWATER SYSTEM.
9. APPLICATION RATES AND METHODS FOR USE OF FERTILIZERS AND PESTICIDES AT THE CONSTRUCTION SITE SHALL CONFORM WITH ALL LOCAL AND STATE ORDINANCES. NUTRIENTS SHALL BE APPLIED ONLY AT RATES NECESSARY TO ESTABLISH AND MAINTAIN VEGETATION SUCH THAT DISCHARGES WILL NOT CAUSE OR CONTRIBUTE TO VIOLATIONS OF STATE SURFACE OR GROUNDWATER QUALITY STANDARDS.
10. OFF-SITE VEHICLE TRACKING OF SEDIMENTS AND THE GENERATION OF DUST SHALL BE MINIMIZED BY CONTRACTOR.

DEWATERING NOTES:

1. DURING THE EXCAVATION OF THE STORMWATER PONDS, THE CONTRACTOR MUST CONSTRUCT A SEDIMENT BASIN TO PROVIDE A DISCHARGE POINT FOR DEWATERING. THE SEDIMENT BASIN CAN BE A CELL IN THE PROPOSED EXCAVATION AREA OF A POND OR IT CAN BE A BERM AREA ABOVE GROUND. ALL DEWATERING MUST BE HELD IN THE SEDIMENT AREA WITH THE WATER IS CLEAN SUCH THAT THERE WOULD BE NO TURBID DISCHARGE.
2. DURING EXCAVATION, THE CONTRACTOR SHALL NOT PENETRATE THE EXISTING CLAY LAYER IF PRESENT. IF THE CONTRACTOR ENCOUNTERS THE CLAY LAYER, HE/SHE IS TO PLACE A MINIMUM OF 2" OF SANDY MATERIAL OVER THE CLAY AND TERMINATE THE DEPTH OF THE EXCAVATION.
3. IF CONTRACTOR ENCOUNTERS SILT/CLAY SAND, WHICH CAUSE THE WATER TO BECOME TURBID, HE/SHE SHALL TREAT THE SEDIMENT BASIN WITH A CHEMICAL ADDITIVE SUCH AS ALUM TO PROMOTE THE COAGULATION AND SETTLEMENT OF THE PARTICLES FOR THE WATER TO BECOME LESS TURBID. IF TURBID WATER IS ENCOUNTERED DURING EXCAVATION OF THE POND, THE CONTRACTOR SHALL NOTIFY THE ENGINEER OF RECORD IMMEDIATELY TO DETERMINE THE COURSE OF ACTION THAT IS APPROPRIATE TO ELIMINATE THE TURBIDITY AND ALLOW DISCHARGE THAT MEETS WATER QUALITY STANDARDS.
4. THE CONTRACTOR SHALL SEQUENCE THE EXCAVATION OF THE STORMWATER PONDS SUCH THAT A SEDIMENT BASIN WILL BE AVAILABLE AT ALL TIMES. THE SEDIMENT BASIN CAN BE RELOCATED AS NECESSARY TO ENSURE THE WATER WITHIN THE SEDIMENT BASIN BECOMES NON-TURBID AND ACCEPTABLE FOR DISCHARGE OFF-SITE.

BEST MANAGEMENT PRACTICES:

THIS PLAN HAS BEEN PREPARED TO ENSURE COMPLIANCE WITH APPROPRIATE CONDITIONS OF LOCAL, STATE, AND FEDERAL REGULATIONS. THE PLAN ADDRESSES THE FOLLOWING AREAS:

1. GENERAL EROSION CONTROL
2. PROTECTION OF SURFACE WATER QUALITY DURING AND AFTER CONSTRUCTION
3. CONTROL OF WIND EROSION

THE VARIOUS TECHNIQUES OR ACTIONS IDENTIFIED UNDER EACH SECTION INDICATE THE APPROPRIATE SITUATION WHEN THE TECHNIQUES SHOULD BE EMPLOYED. IT SHOULD BE NOTED THAT THE MEASURES IDENTIFIED ON THIS PLAN ARE ONLY SUGGESTED BMP(S). THE CONTRACTOR SHALL PROVIDE POLLUTION PREVENTION AND EROSION CONTROL MEASURES AS SPECIFIED IN FOOT INDEX #102 AND AS NECESSARY FOR EACH SPECIFIC APPLICATION.

DEMOLITION NOTES (IF NECESSARY):

1. CONTRACTOR SHALL SUBMIT DEMOLITION SCHEDULE TO OWNER PRIOR TO PROCEEDING WITH DEMOLITION ACTIVITIES.
2. EXTENT OF SITE CLEARING IS SHOWN ON DRAWINGS.
3. SITE DEMOLITION WORK INCLUDES, BUT IS NOT LIMITED TO:
 - A. ROADWAY
 - B. DRAINAGE AREA
 - C. SITE UTILITIES
 - D. LANDSCAPING
4. CONTRACTOR SHALL DEMOLITION OPERATIONS TO ENSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, WALKS, AND OTHER ADJACENT OCCUPIED OR USED FACILITIES. DO NOT CLOSE OR OBSTRUCT STREETS, WALKS OR OTHER OCCUPIED OR USED FACILITIES WITHOUT PROTECTING FROM ADJACENT JURISDICTIONS HAVING JURISDICTION.
5. PROVIDE PROTECTION NECESSARY TO PREVENT DAMAGE TO EXISTING IMPROVEMENTS INDICATED ON PLAN AS "EXISTING TO REMAIN".

SILT FENCE APPLICATIONS

SECTION 1 GENERAL EROSION CONTROL:

- 1.1 GENERAL EROSION CONTROL BEST MANAGEMENT PRACTICES SHALL BE EMPLOYED TO MINIMIZE SOIL EROSION AND POTENTIAL POND SLOPE FAILURES. WHILE THE VARIOUS TECHNIQUES REQUIRED WILL BE SITE AND PLAN SPECIFIC, THEY SHOULD BE EMPLOYED AS SOON AS POSSIBLE DURING CONSTRUCTION ACTIVITIES.
- 1.2 CLEARED SITE DEVELOPMENT AREAS NOT CONTINUALLY USED FOR CONSTRUCTION ACTIVITIES SHALL BE COVERED WITH HAY AND/OR OVERSEEDED AND SUFFICIENTLY WATERED TO STABILIZE THE TEMPORARY GROUND COVER.
- 1.3 BANKS OF RETENTION/DETENTION PONDS SHALL NOT BE CONSTRUCTED STEEPER THAN 4H:1V FROM TOP OF BANK TO TWO FEET BELOW THE CONTROL ELEVATION.
- 1.4 A 1-FOOT WIDE STRIP OF SOD SHALL BE PLACED ALONG ALL CURBING AND AROUND ALL INLETS. SOD SHALL BE PLACED BEFORE SILT BARRIERS ARE REMOVED.
- 1.5 THE CONTRACTOR WILL STABILIZE BY SEED AND MULCH, SOD, OR OTHER APPROVED MATERIALS ANY DISTURBED AREAS WITHIN ONE WEEK FOLLOWING COMPLETION OF THE UTILITY SYSTEMS AND PAVEMENT AREAS. CONTRACTOR SHALL MAINTAIN SUCH AREAS UNTIL FINAL ACCEPTANCE BY THE OWNER. THE CONTRACTOR IS TO COORDINATE WITH THE OWNER REGARDING THE TYPE OF MATERIAL, LANDSCAPING AND IRRIGATION REQUIREMENTS.

SECTION 2 PROTECTION OF SURFACE WATER QUALITY DURING AND AFTER CONSTRUCTION:

- 2.1 SURFACE WATER QUALITY SHALL BE MAINTAINED BY EMPLOYING THE FOLLOWING BEST MANAGEMENT PRACTICES IN THE CONSTRUCTION PLANNING AND CONSTRUCTION OF ALL IMPROVEMENTS.
- 2.2 WHERE PRACTICAL, STORMWATER SHALL BE CONVEYED BY SWALES.
- 2.3 EROSION CONTROL MEASURES SHALL BE EMPLOYED TO MINIMIZE TURBIDITY OF SURFACE WATERS LOCATED DOWNSTREAM OF ANY CONSTRUCTION ACTIVITY. WHILE THE VARIOUS MEASURES REQUIRED WILL BE SITE SPECIFIC, THEY SHALL BE EMPLOYED AS NEEDED IN ACCORDANCE WITH THE FOLLOWING:
 - A. IN GENERAL, EROSION SHALL BE CONTROLLED AT THE FURTHEST PRACTICAL UPSTREAM LOCATION.
 - B. STORMWATER INLETS SHALL BE PROTECTED DURING CONSTRUCTION AS SHOWN IN FOOT INDEX 102. PROTECTION MEASURES SHALL BE EMPLOYED AS SOON AS PRACTICAL DURING THE VARIOUS STAGES OF INLET CONSTRUCTION. SILT BARRIERS SHALL REMAIN IN PLACE UNTIL SODDING AROUND INLETS IS COMPLETE.
 - 2.4 HEAVY CONSTRUCTION EQUIPMENT PARKING AND MAINTENANCE AREAS SHALL BE DESIGNED TO PREVENT OIL, GREASE, AND LUBRICANTS FROM ENTERING SITE DRAINAGE FEATURES INCLUDING STORMWATER COLLECTION AND TREATMENT SYSTEMS. CONTRACTORS SHALL PROVIDE BROAD DIKES, HAY BALES OR SILT SCREENS AROUND, AND SEDIMENT SUMPS WITHIN SUCH AREAS TO CONTAIN SPILLS OF OIL, GREASE OR LUBRICANTS. CONTRACTORS SHALL HAVE AVAILABLE, AND USE ABSORBENT FILTER PADS TO CLEAN UP SPILLS AS SOON AS POSSIBLE AFTER OCCURRENCE.
 - 2.5 SILT BARRIERS: ANY SILT WHICH ACCUMULATES BEHIND THE BARRIERS AND ANY FILL USED TO ANCHOR THE BARRIERS SHALL BE REMOVED PROMPTLY AFTER THE END OF THE MAINTENANCE PERIOD SPECIFIED FOR THE BARRIERS.
 - 2.6 PREVENT EROSION FROM SHEET FLOW ACROSS BARE GROUND FROM ENTERING A LAKE OR SWALE BY INSTALLING A TEMPORARY SEDIMENT SUMP AS REQUIRED. THE TEMPORARY SEDIMENT SUMP SHALL REMAIN IN PLACE UNTIL VEGETATION IS ESTABLISHED ON THE GROUND DRAINING TO THE SUMP.

SECTION 3 CONTROL OF WIND EROSION:

- 3.1 WIND EROSION SHALL BE CONTROLLED BY EMPLOYING THE FOLLOWING METHODS AS NECESSARY AND APPROPRIATE:
 - A. BARE EARTH AREAS SHALL BE WATERED DURING CONSTRUCTION AS NECESSARY TO MINIMIZE THE TRANSPORT OF FUGITIVE DUST. IT MAY BE NECESSARY TO LIMIT CONSTRUCTION VEHICLE SPEED IF BARE EARTH HAS NOT BEEN EFFECTIVELY WATERED. IN NO CASE SHALL FUGITIVE DUST BE ALLOWED TO LEAVE THE SITE UNDER CONSTRUCTION.
 - B. AS SOON AS PRACTICAL AFTER COMPLETION OF CONSTRUCTION, BARE EARTH AREAS SHALL BE VEGETATED.
 - C. ANY TIME DURING AND AFTER SITE CONSTRUCTION THAT WATERING AND/OR VEGETATION IS NOT EFFECTIVE IN CONTROLLING WIND EROSION AND/OR THE TRANSPORT OF FUGITIVE DUST, OTHER METHODS AS ARE NECESSARY FOR SUCH CONTROL SHALL BE EMPLOYED. THESE METHODS MAY INCLUDE ERECTION OF DUST CONTROL FENCES. DUST CONTROL FENCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH FOOT INDEX 102, EXCEPT THE MINIMUM HEIGHT SHALL BE 4 FEET.

PROJECT SUMMARY: This is a request to approve the Apopka Business Complex – Final Development Plan that comprises of development approximately 1.8 acres of area on the southern portion of a tract of over 21 acres of existing light industrial uses. The proposed building is 30,050 square in size dedicated to light industrial flexible use space that includes product storage with private offices. The proposed building replaces two smaller existing buildings onsite to be demolished.

PARKING: The City’s Land Development Code addressing parking requirements is broad with regard to industrial land uses. In the case of this project, the closest category, Industrial, would require 75 total parking spaces. The applicant believes the LDC over generates the number of parking spaces required for the activities that will occupy the new buildings and would like the number of parking spaces reduced to 42. To substantiate this, an Alternative Parking Analysis was submitted to support a reduction in the required number of parking spaces for this project from approximately .25 parking spaces/1,000 square feet GFA (calculated using the requirements in the City’s Land Development Code) to .14 parking spaces/1,000 square feet GFA. The analysis used a methodology and data from the *Institute of Transportation Engineers Parking Generation Manual, 4th Edition* as allowed by the City’s Land Development Code. Based on this analysis, 39 parking spaces (.13 parking spaces/1,000 square feet GFA) would sufficiently serve this development. Staff finds the analysis supports the reduction of parking spaces from 75 to 42.

ACCESS: Access to the site will remain via Sheeler Road, Modifications to the access connection are not required.

TRANSPORTATION: The new development is estimated to generate 209 Daily trips and 29 PM Peak Hour trips. After subtracting the estimated trip generation for the 2 buildings being demolished, the net new trip generation estimate is 178 Daily trips and 24 PM Peak hour trips.

Because this project generates less than 400 Daily trips, a Traffic Impact Analysis was not required. Staff reviewed the existing traffic volumes on Sheeler Road in the vicinity and verified sufficient capacity is available to accommodate this slight increase in Daily and PM Peak Hour traffic.

STORMWATER: Per the City Engineer, no impervious surface is increasing or added, therefore, no stormwater system is required.

LANDSCAPING/BUFFER/TREE PROGRAM: As part of the development plan approval, understory trees and a hedge are lined along the southern boundary. Sabal Palms, Ligustrum Trees and Holly Trees will be used due to the restrictions created by the 15-foot wide power easement adjacent to the existing access easement being utilized by homeowners adjacent to the southern boundary of the project site. In addition to the landscaping, the site plan shows a wall buffer adjacent to the existing residential subdivision on the south at the length of the area of development.

Based on the following arbor assessment, the applicant will be providing 94.5 tree inches onsite and 13 inches of non-specimen inches will be removed:

Arbor Assessment

Total inches on area of development (before removal):	127
Total specimen inches removed	0
Total non-specimen inches removed	13
Total inches retained:	114
Total inches added:	94.5
Total inches post development:	208.5

VARIANCE(S): At the Planning Commission meeting on April 10, 2018, a variance, VAR18-02 Little Brownie Properties, was approved for the subject property allowing a 20 foot reduction from the required 50-foot wide landscape buffer approximately 764 linear feet along the southern property line, measured westward from the Sheeler Avenue right-of-way.

PUBLIC HEARING SCHEDULE:

October 23, 2018 – Planning Commission, 5:30 pm
November 7, 2018 – City Council, 1:30 pm

RECOMMENDATION ACTION:

The **Development Review Committee** recommends approval of the Apopka Business Complex Addition – Final Development Plan, subject to the findings of this staff report and the public hearing findings for VAR18-02 Little Brownie Property.

Planning Commission Recommendation: Find the Apopka Business Complex Addition – Final Development Plan consistent with the Land Development Code and Comprehensive Plan, and recommend approval of Final Development Plan, subject to the findings of this staff report and the public hearing findings for VAR18-02 Little Brownie Property.

Planning Commission Role: The role of the Planning Commission for this development application is to advise the City Council to approve or deny based on consistency with the Comprehensive Plan and Land Development Code.

Note: This item is considered quasi-judicial. The staff report and its findings are to be incorporated into and made a part of the minutes of this meeting.

CONSTRUCTION SEQUENCE

1. INSTALL STABILIZED CONSTRUCTION ENTRANCE
2. INSTALL SILT FENCES (STAKED EVERY 100' MAX) AND SYNTHETIC BALES AS REQUIRED
3. STOCKPILE TOPSOIL IF REQUIRED
4. PERFORM PRELIMINARY GRADING ON SITE AS REQUIRED
5. STABILIZE DENUDED AREAS AND STOCKPILES AS SOON AS PRACTICAL
6. INSTALL STORM SEWER
7. CONSTRUCT BUILDING AND OTHER UNDERGROUND UTILITIES
8. INSTALL PAVEMENT AND CURBING
9. INSTALL LANDSCAPE AND SOG
10. REMOVE ACCUMULATED SEDIMENT FROM BASINS
11. WHEN ALL CONSTRUCTION ACTIVITY IS COMPLETE AND THE SITE IS STABILIZED, REMOVE ANY TEMPORARY BMP MEASURES.

SOIL TYPES

SEE GRADING PLAN

DEWATERING METHODS AND LOCATIONS

DEWATERING SHALL BE UTILIZED ONLY IF NECESSARY BY MEANS OF WELL POINT SYSTEM. DISCHARGE FROM THE WELL POINT SYSTEM SHALL BE DIRECTED TO THE PROPOSED DRAINAGE STRUCTURES. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS FOR WELL POINT SYSTEM PRIOR TO CONSTRUCTION.

EROSION TEMPORARY MEASURES (BMP'S)

1. SYNTHETIC BALE BARRIERS SHALL BE USED TO PROTECT PROPOSED INLETS PER DETAILS
2. FILTER FABRIC BARRIERS SHALL BE USED AT THE PERIMETER/LIMITS OF PROPOSED CONSTRUCTION TO PREVENT SEDIMENT FROM LEAVING THE PROJECT BOUNDARIES OR DISCHARGING INTO OFF-SITE DRAINAGE FACILITIES
3. STOCKPILING MATERIAL: NO EXCAVATED MATERIAL SHALL BE STOCKPILED IN SUCH A MANNER AS TO DIRECT RUNOFF DIRECTLY OFF THE PROJECT SITE INTO ANY ADJACENT WATER BODY OR STORMWATER COLLECTION FACILITY
4. INLET PROTECTION: INLETS AND CATCH BASINS WHICH DISCHARGE DIRECTLY OFF-SITE SHALL BE PROTECTED FROM SEDIMENT-LADEN STORM RUNOFF UNTIL THE COMPLETION OF ALL CONSTRUCTION OPERATIONS THAT MAY CONTRIBUTE SEDIMENT TO THE INLET TEMPORARY SEEDING AND MULCHING: AREAS OPENED BY CONSTRUCTION OPERATIONS AND THAT AREA NOT ANTICIPATED TO BE RE-EXCAVATED OR DRESSED AND RECEIVE FINAL GRASSING TREATMENT WITHIN 30 DAYS SHALL BE SEED WITH A QUICK GROWING GRASS SPECIES WHICH WILL PROVIDE AN EARLY COVER DURING THE SEASON IN WHICH IT IS PLANTED AND WILL NOT LATER COMPETE WITH THE PERMANENT GRASSING. SLOPES STEEPER THAN 6:1 THAT FALL WITHIN THE CATEGORY ESTABLISHED IN PARAGRAPH NUMBER 2 ABOVE SHALL ADDITIONALLY RECEIVE MULCHING OF APPROXIMATELY 2 INCHES LOOSE MEASURE OF MULCH MATERIAL CUT INTO THE SOIL OF SEEDING AREA ADEQUATE TO PREVENT MOVEMENT OF SEED AND MULCH
5. MAINTENANCE: ALL FEATURES OF THE PROJECT DESIGNED AND CONSTRUCTED TO PREVENT EROSION AND SEDIMENT CONTROL SHALL BE MAINTAINED DURING THE LIFE OF THE CONSTRUCTION SO AS TO FUNCTION AS THEY WERE ORIGINALLY DESIGNED AND CONSTRUCTED.

ADDITIONAL NOTES

1. NON-STORMWATER DISCHARGES: IT IS EXPECTED THAT THE FOLLOWING NON-STORMWATER DISCHARGES WILL OCCUR FROM THE SITE DURING THE CONSTRUCTION PERIOD:
 - 1.1. PAVEMENT WASH WATERS (WHERE NO SPILLS OR LEAKS OF TOXIC OR HAZARDOUS MATERIALS HAVE OCCURRED).
 - 1.2. UNCONTAMINATED GROUNDWATER (FROM DEWATERING EXCAVATION). ALL NON-STORMWATER DISCHARGES WILL BE DIRECTED TO THE PROPOSED DRAINAGE STRUCTURES/SWALES.
2. CONTRACTOR IS RESPONSIBLE FOR INSTALLING ANY ADDITIONAL EROSION CONTROL IF IT BECOMES NECESSARY TO MEET THE STATE AND LOCAL STANDARDS.

INSPECTIONS

1. CONSTRUCTION SITE WILL BE INSPECTED FOR EROSION PROBLEMS DAILY AFTER EACH RAINFALL GREATER THAN 0.5 INCHES. A RAIN GAGE WILL BE ON SITE TO MEASURE THE RAINFALL AMOUNTS.
2. ALL CONTROL MEASURES WILL BE INSPECTED BY THE SUPERINTENDENT, THE PERSON RESPONSIBLE FOR THE DAY TO DAY SITE OPERATIONS OR SOMEONE APPOINTED BY THE SUPERINTENDENT AT LEAST ONCE AND FOLLOWING ANY STORM EVEN OF 0.25 INCHES OR GREATER.
3. ALL TURBIDITY CONTROL MEASURES WILL BE MAINTAINED IN GOOD WORKING ORDER; IF A REPAIR IS NECESSARY, IT WILL BE INITIATED WITHIN 24 HOURS.
4. BUILT UP SEDIMENT WILL BE REMOVED FROM THE SILT FENCE WHEN IT HAS REACHED ON-THIRD THE HEIGHT OF THE FENCE.
5. THE SILT FENCE WILL BE INSPECTED FOR DEPTH OF SEDIMENT, TEARS, TO SEE IF THE FABRIC IS SECURELY ATTACHED TO THE FENCE POSTS, AND TO SEE THAT THE FENCE POSTS ARE FIRMLY IN THE GROUND.
6. TEMPORARY AND PERMANENT SEEDING AND PLANTING WILL BE INSPECTED FOR BARE SPOTS, WASHOUTS, AND HEALTHY GROWTH.
7. A MAINTENANCE INSPECTION REPORT WILL BE MADE AFTER EACH INSPECTION. A COPY OF THE REPORT FORM TO BE COMPLETED CAN BE OBTAINED BY THE ENGINEER. THE REPORTS WILL BE KEPT ON SITE DURING CONSTRUCTION AND AVAILABLE UPON REQUEST TO THE OWNER, ENGINEER OR ANY FEDERAL, STATE OR LOCAL AGENCY APPROVING SEDIMENT AND EROSION CONTROL PLANS OR STORMWATER MANAGEMENT PLANS. THE REPORTS SHALL BE MADE AND RETAINED AS PART OF THE STORMWATER POLLUTION PREVENTION PLAN FOR AT LEAST THREE YEARS FROM THE DATE THAT THE SITE IS FINALLY STABILIZED AND THE NOTICE OF TERMINATION IS SUBMITTED. THE REPORTS SHALL IDENTIFY ANY INCIDENTS OF NON-COMPLIANCE.
8. PERSONNEL SELECTED FOR INSPECTION AND MAINTENANCE RESPONSIBILITIES WILL RECEIVE TRAINING FROM THE SITE SUPERINTENDENT. THEY WILL BE TRAINED IN ALL THE INSPECTION AND MAINTENANCE PRACTICES NECESSARY FOR KEEPING THE EROSION AND SEDIMENT CONTROLS USED ON-SITE IN GOOD WORKING ORDER AND FILLING OUT THE INSPECTION AND MAINTENANCE REPORTS.

PERMANENT EROSION CONTROL MEASURES (BMP'S)

1. PERMANENT SODDING: ALL AREAS WHICH HAVE BEEN DISTURBED BY CONSTRUCTION WILL, AT A MINIMUM, BE SODDED. THE SEEDING MIX MUST PROVIDE BOTH LONG-TERM VEGETATION AND RAPID GROWTH SEASONAL VEGETATION. SLOPES STEEPER THAN 4:1 SHALL BE SEED AND MULCHED OR SODDED.
2. MAINTENANCE OF STORMWATER MANAGEMENT SYSTEM: THE PERMITTED STORMWATER MANAGEMENT SYSTEM SHALL BE MAINTAINED, CLEANED AND INSPECTED IN ACCORDANCE WITH THE WATER MANAGEMENT DISTRICT PERMIT.

1. PUBLIC SIDEWALK CURB RAMPS SHALL BE CONSTRUCTED IN THE PUBLIC RIGHT OF WAY AT LOCATIONS THAT WILL PROVIDE CONTINUOUS UNOBSTRUCTED PEDESTRIAN CIRCULATION PATHS TO PEDESTRIAN AREAS, ELEMENTS AND FACILITIES IN THE PUBLIC RIGHT OF WAY AND TO OTHER PEDESTRIAN ACCESSIBLE AREAS. CURBS AND RAMPS SHALL BE CONSTRUCTED AT ALL INTERSECTIONS AND THOSE WITHOUT SIDEWALKS ARE TO HAVE CURB RAMPS CONSTRUCTED AT ALL STREET INTERSECTIONS AND AT TURNOUTS THAT HAVE CURBED RETURNS. PARTIAL CURB RETURNS SHALL BE PROVIDED FOR ALL STREETS WITH SIDEWALKS. CURB RAMPS SHALL BE CONSTRUCTED AT LOCATIONS WITHOUT SIDEWALKS SHALL HAVE A 5' X 5' LANDING CONSTRUCTED AT THE TOP OF EACH RAMP.
2. THE LOCATION OF CURB RAMPS SHALL BE DETERMINED BY THE PLANS, BUT SHALL CONFORM TO THE STANDARD DETAILS. ALL RAMPS, LANDINGS AND CURBS SHALL BE CONSTRUCTED WITH MINIMUM 3000 PSI, CLASS A CONCRETE AND SHALL HAVE MINIMUM THICKNESS OF 6 INCHES. ALL CONCRETE FOR PEDESTRIAN AREAS SHALL HAVE A MEDIUM BROOM FINISH AND STANDARD COLOR MATCHING TO THE ADJACENT PAVEMENT FLARE.
3. CURB RAMP RUNNING SLOPES AT UNRESTRAINED SITES SHALL NOT BE STEEPER THAN 1 : 12 AND CROSS SLOPE SHALL NOT BE STEEPER THAN 2% TRANSITION SLOPES SHALL NOT BE STEEPER THAN 1 : 12. WHERE THE SLOPE REQUIREMENTS FOR THE TRANSITION SLOPE DEVELOPMENT PRECLUDES THE ACCOMMODATION OF A RAMP SLOPE OF 1 : 12, A RUNNING SLOPE BETWEEN 1 : 12 AND 1 : 10 IS PERMITTED FOR A RISE OF 6" MAXIMUM AND A RUNNING SLOPE OF BETWEEN 1 : 10 AND 1 : 8 IS PERMITTED FOR A RISE OF 9" MAXIMUM. IF SUCH DEVELOPMENT PRECLUDES THE ACCOMMODATION OF A RAMP SLOPE, THE MINIMUM FEASIBLE CROSS SLOPE SHALL BE PROVIDED.
4. IF A CURB RAMP IS LOCATED WHERE PEDESTRIANS MUST WALK ACROSS THE RAMP, THEN THE RAMP SHALL HAVE A MINIMUM LONGITUDINAL SLOPE OF 1 : 12, AND A 2% CROSS SLOPE. RAMPS WITH CURB RETURNS MAY BE USED TO PROVIDE GUIDANCE, AVOID AN OBSTACLE, OR WHEN R/W LIMITATIONS PROHIBIT FLARES. FIG. 502

1. A SOIL TRAPPING PREVENTION DEVICE (STPD) SHALL BE CONSTRUCTED AT LOCATION DESIGNATED BY THE ENGINEER FOR POINTS OF EGRESS FROM UNSTABILIZED AREAS OF THE PROJECT TO PUBLIC ROADS WHERE OFF-SITE TRACKING OF MUD COULD OCCUR. TRAFFIC FROM UNSTABILIZED AREAS OF THE CONSTRUCTION PROJECT SHALL BE DIRECTED THRU A STPD. BARRIERS FLAGGING, OR OTHER POSITIVE MEANS SHALL BE USED AS REQUIRED TO LIMIT AND CONTROL VEHICULAR TRAFFIC TO THE STPD.
2. THE CONTRACTOR MAY PROPOSE AN ALTERNATIVE TO MINIMIZE OFF-SITE TRACKING OF SEDIMENT. THE ALTERNATIVE MUST BE REVIEWED AND APPROVED BY THE ENGINEER AND/OR LOCAL MUNICIPALITY PRIOR TO ITS USE.
3. MATERIAL (SILT, CLAY, DRIPPED, OR TRACKED OUT) FROM PILES/ROADS (INCLUDING THE STPD AGGREGATE AND CONSTRUCTION MUD) SHALL BE REMOVED DAILY, OR MORE FREQUENTLY IF SO DIRECTED BY THE ENGINEER AND/OR LOCAL MUNICIPALITY.
4. AGGREGATES SHALL BE DESCRIBED IN SECTION 901 EXCLUDING 901-2.3. AGGREGATES SHALL BE FDOT SIZE #1. IF THIS SIZE IS NOT AVAILABLE, THE NEXT AVAILABLE SMALLER SIZE AGGREGATE SHALL BE SUBSTITUTED WITH THE APPROVAL OF THE ENGINEER. SIZES CONTAINING EXCESSIVE SILT AGGREGATE WILL BE REJECTED.
5. THE PRELIMINARY DESIGNATION OF THE STPD SHALL BE 30' X 50' X 200 FT. THE SEDIMENT PIT SHOULD PROVIDE A RETENTION VOLUME OF 3600 CUBIC FEET/ACRE OF SURFACE AREA DRAINING TO THE PIT. WHEN THE STPD IS ISOLATED FROM OTHER DRAINAGE AREAS, THE FOLLOWING PIT VOLUMES WILL SATISFY THIS REQUIREMENT:
- 30' X 100' FT. 30' X 50' X 200 FT.
6. THE SWALE DITCH DRAINING THE STPD SHALL HAVE A 0.02% MINIMUM AND A 1.0% MAXIMUM GRADE ALONG THE STPD AND TO THE SEDIMENT PIT.
7. MITERED END SECTIONS ARE NOT REQUIRED WHEN THE SIDEPIRAN PITY SATISFIES THE CLEAR ZONE REQUIREMENTS.
8. THE STPD SHALL BE DESIGNED TO ALLOW THE STPD TO ALLOW IT TO PERFORM ITS FUNCTION WITHOUT OFF-SITE TRACKING. THE STPD SHALL BE RINSED (DAILY WHEN IN USE) TO REMOVE ACCUMULATED MUD DOWNWARD THRU THE STONE. ADDITIONAL STABILIZATION OF THE VEHICULAR ROUTE LEADING TO THE STPD MAY BE REQUIRED TO LIMIT THE MUD TRACKED.
9. THE NOMINAL SIZE OF A STANDARD STPD IS 15'X50' UNLESS OTHERWISE SHOWN IN THE PLANS. IF THE VOLUME OF ENTERING AND EXITING VEHICLES WARRANTS IT, A STPD MAY BE USED IF APPROVED BY THE ENGINEER. WHEN A DOUBLE WIDTH (30') STPD IS USED, THE PAY QUANTITY SHALL BE 2 FOR EACH LOCATION.

NTS

WHERE CURB RAMPS ARE CONSTRUCTED IN EXISTING SIDEWALKS WITH SIDEWALK OR UTILITY STRIP SLOPES GREATER THAN 2% OR THE SIDEWALK IS TOO HIGH TO MEET THE 1:12 RAMP SLOPE, THE SIDEWALK SHALL BE RECONSTRUCTED AS NECESSARY TO REDUCE THE SLOPES TO 2% AT THE FLARE POINT AND MATCH THE RAMP SLOPE.

MODEL RC0194 FLUSH VALVE
WHEN THE PUMP STARTS, THE VALVE OPENS FOR APPROXIMATELY 10-30 SECONDS, SHOOTING OUT A POWERFUL JET STREAM THAT FLUSHES ALL SOLIDS INTO SUSPENSION, READY TO BE PUMPED AWAY. BECAUSE THE FLUSHING SEQUENCE IS AN INTEGRAL PART OF THE PUMPING CYCLE, FLUSHING OCCURS EVERY TIME THE PUMP STARTS. THIS REDUCES GREASE AND SOLIDS BUILD-UP AND REDUCES UNPLEASANT ODORS.

- IRRIGATION GENERAL NOTES**
1. THE IRRIGATION CONTRACTOR SHALL REFER TO THE LANDSCAPE PLAN WHEN TRENCHING TO LAY PIPE TO AVOID NEW AND EXISTING TREES AND LARGE SHRUBS.
 2. ALL WIRING FROM THE IRRIGATION CONTROLLER TO THE REMOTE CONTROL VALVES SHALL BE UF-14/1 DIRECT BURIAL CABLE. ALL WIRE SPLICES SHALL BE MADE IN VALVE BOXES ONLY USING RAINBIRD SNAP-TITE CONNECTORS AND SEALANT.
 3. UNLESS OTHERWISE INDICATED, PIPE TO A SINGLE SPRAY HEAD SHALL BE 1/2" PVC CL-315 PIPING.
 4. ALL MAINLINE PIPING SHALL BE BURIED TO HAVE A MINIMUM COVER OF 18 INCHES. ALL LATERAL PIPING DOWNSTREAM OF THE MAINLINE SHALL BE BURIED TO HAVE A MINIMUM COVER OF 12 INCHES.
 5. THE IRRIGATION CONTRACTOR SHALL COORDINATE WITH THE OWNER OR ARCHITECT ON THE EXACT LOCATION OF THE IRRIGATION CONTROLLER.
 6. THE IRRIGATION CONTRACTOR SHALL VERIFY ALL CONDITIONS AND DIMENSIONS SHOWN ON THE PLANS AT THE SITE PRIOR TO COMMENCEMENT OF WORK UNDER THIS CONTRACT.
 7. ALL IRRIGATION INSTALLATION SHALL CONFORM TO LOCAL CODES AND REGULATIONS.
 8. ALL PIPING ON THE PLANS IS DIAGRAMMATICALLY ROUTED FOR CLARITY AND SHALL BE ROUTED TO AVOID NEW AND EXISTING PLANTS. DESIGN MODIFICATIONS SHALL ONLY BE MADE AS NECESSARY TO MEET FIELD CONDITIONS AND ONLY UPON APPROVAL OF THE LANDSCAPE ARCHITECT.
 9. THE IRRIGATION CONTRACTOR SHALL BE RESPONSIBLE FOR THE FINAL ADJUSTMENT OF THE SPRINKLERS ARC AND RADIUS TO ASSURE 100 PERCENT COVERAGE.
 10. 115 VOLT, SINGLE PHASE ELECTRICAL POWER IS REQUIRED TO OPERATE THE IRRIGATION CONTROLLER. THE IRRIGATION CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING THE LOCATION OF THE POWER WITH THE OWNER OR OWNER'S REPRESENTATIVE. IT SHALL BE THE RESPONSIBILITY OF THE IRRIGATION CONTRACTOR TO SEE THAT THE CONTROLLER IS WIRED IN ACCORDANCE WITH ALL ELECTRICAL CODES BY A LICENSED ELECTRICIAN. ALL MATERIALS NECESSARY TO WIRE THE CONTROLLER SHALL BE FURNISHED BY THE IRRIGATION CONTRACTOR.
 11. THE IRRIGATION CONTRACTOR SHALL CHOOSE THE APPROPRIATE NOZZLES TO PROVIDE MAXIMUM COVERAGE.

12. ALL LANDSCAPE IRRIGATION SYSTEMS SHALL BE LOW-VOLUME IRRIGATION SYSTEMS. A LOW-VOLUME IRRIGATION SYSTEM IS DESIGNED TO PROVIDE NO MORE THAN THE MINIMUM AMOUNT OF WATER REQUIRED BY ANY SPECIFIC LANDSCAPE MATERIAL TO ENSURE SURVIVAL OF THAT MATERIAL. SUCH A SYSTEM UTILIZES A COMBINATION OF SPRINKLER MECHANISMS AND ZONES TO ACCOMMODATE THE INDIVIDUAL IRRIGATION REQUIREMENTS OF EACH TYPE OF LANDSCAPE MATERIAL, INCLUDING TREES, SHRUBS, ORNAMENTALS AND TURF AREAS.
13. ALL UNDERGROUND IRRIGATION SYSTEMS SHALL BE REGULATED BY AN AUTOMATIC TIMER OR CONTROLLER.
14. THE DESIGN OF THE IRRIGATION SYSTEM SHALL INCLUDE SPRINKLER HEADS AND DEVICES APPROPRIATE FOR THE LANDSCAPE MATERIALS TO BE IRRIGATED.
15. LOW TRAJECTORY HEADS OR LOW-VOLUME WATER DISTRIBUTING DEVICES SHALL BE USED TO IRRIGATE CONFINED AREAS IN ORDER TO PREVENT OVERSPRAY ONTO IMPERVIOUS AREAS.
16. IRRIGATION SYSTEMS SHALL BE DESIGNED TO PLACE HIGH WATER DEMAND AREAS, SUCH AS LAWNS, ON SEPARATE ZONES FROM THOSE AREAS WITH REDUCED WATER REQUIREMENTS.
17. AUTOMATICALLY CONTROLLED IRRIGATION SYSTEMS SHALL BE OPERATED BY AN IRRIGATION CONTROLLER THAT IS CAPABLE OF IRRIGATING HIGH REQUIREMENT AREAS.

ADDITIONAL IRRIGATION CLARIFICATIONS:

1. VELOCITY IN THE LATERAL PIPES NOT TO EXCEED 5 FEET PER SECOND IN EACH ZONE.
2. ALL IRRIGATION LINES UNDER PAVED AREAS & PROPOSED WALL TO BE SLEEVED WITH SCH. 40 SLEEVING SIZED AT LEAST (2) TIMES THE DIAMETER OF THE IRRIGATION LINE SIZE.

IRRIGATION SYSTEM MAINTENANCE CHECKLIST

1. ____ Make sure the controller (timer) is set to the correct water restrictions.
2. ____ Check each zone once per month to ensure there are no broken irrigation heads and that you have 100% coverage.
3. ____ Adjust each zone twice per year to ensure the correct spray pattern and to ensure impervious surfaces are not being watered.
4. ____ Set irrigation frequency to once per week during the months of December, January and February and twice per week the rest of the months. Make sure the day and time corresponds to the local water restrictions.
5. ____ Add mulch to landscape as needed to maintain 3-inches on all beds.
6. ____ Check rain sensor quarterly to make sure it is functioning.
7. ____ Calibrate irrigation zones once per year using flat-bottomed cans so that no more than 1/8-inch per application is applied in the high volume zone, no more than 1/4-inch per application is applied in the medium volume zone, and no more than 1/8-inch per application is applied in the low volume zone. The above mentioned settings presume two watering days per week. Note: Controller must be adjusted to keep the irrigation within the water restrictions time frame.
8. ____ If your system is equipped with a filter, check and/or clean the filter quarterly.

If someone other than the owner does the above checks, it is recommended they be a Licensed Irrigation Contractor and a member of the Florida Irrigation Society.

Re: SPR18-02R
1350 Sheeler Ave.

Ms. Sanchez:

Apopka Business Complex is a proposed development in Apopka, Florida. The site is located 1350 Sheeler Ave. Apopka, FL. The development would consist of 30,050 square foot Flex Space/Industrial Park building.

The City of Apopka LDC Section 6.03.02 A and 6.03.03 B (5) requires two parking space per 1,000 square feet of GFA plus 1 parking space per 2 employees plus 1 unloading space per 10,000 sf for "Wholesale, industrial, manufacture, processing or assembly", which is the best fit of our use although not completely accurate. Based on this code, the site totals 72 parking space and 3 unloading space (table A). The City has allowed a parking study to determine the parking demand generated by a more accurate categorization of the actual use.

The parking generation rates used to estimate the parking demand are based on the *Institute of Transportation Engineers (ITE) Parking Generation Manual, 4th Edition*. The *ITE Parking Generation Manual* is the industry standard for estimating parking demand for new development. The relevant sheets from the Manual are attached.

For Industrial Park (land use 130, pg. 34), the Average Peak Period Parking is 1.27 vehicles per 1,000 sq. ft. GFA. Therefore, an Industrial building that is 30,050 sf would require 39 parking spaces (Table A). Industrial Park use is defined by ITE as follow:

"Industrial parks contain a number of industrial or related facilities. They are characterized by a mix of manufacturing, service and warehouse facilities with a wide variation in the proportion of each type of use from one location to another. Many industrial parks contain highly diversified facilities-some with a large number of small businesses and others with one or two dominant industries. General light industrial (land Use 110) and manufacturing (Land Use 140)."

The attached plan shows 41 parking spaces, the total potential employees for the building is 24 employees. The proposed 41 parking spaces and 2 loading areas would be enough for all the employees plus some. The manual does not mention loading or unloading spaces, but the requirement is recognized and met to an appropriate standard. The proposed amount of spaces is greater than the value in the parking study.

September 20, 2018

Page 2

In conclusion 75 spaces would be an over design for the proposed usage.

Sincerely,
CivilCorp Engineering, Inc.

Stephen Allen, PE #59994
President.

ADDITIONAL COMMENTS: This is a request to approve Meadow View Apartments Final Development Plan. This project is proposed as a five building, 43 unit, two-story luxury apartment complex. There will be 4 one-bedroom units, 30 two-bedroom units, and 9 three-bedroom units. The one-bedroom units will be 771 square feet; the two-bedroom units will be 977 square feet; and the three-bedroom units will be 1,133 square feet. There are two building types. Building Type “A”, of which there are three, is 18,953 square feet and will house nine units each. Building Type “B”, of which there are two, is 8,088 square feet and will house eight units each.

Meadow View Apartments will have additional amenities that distinguish it as a luxury apartment complex. The Final Development Plan includes development conditions that amenities will include wireless internet access, balcony/porches, a fitness center, a resort style swimming pool and clubhouse, walk-in shower, walk-in closets, full size washer and dryer in each unit, granite counter tops and 9 foot ceilings.

The site is significantly sloped from south to north. On the northwest side, the property slopes down approximately 16 feet over a 10 foot distance. Ten-foot retaining walls are required to support the buildings on the west side of the property.

PARKING: The Land Development Code requires 2 parking spaces per apartment for a total of 86 parking spaces, including 5 handicapped parking. This project is providing 98 parking spaces plus 5 handicapped parking spaces for a total of 103 parking spaces to ensure accommodation of overflow parking when needed.

ACCESS: Access to the site is provided through a single entrance on Vick Road, north of Welch Road. A site distance issue exists due to the curve and elevation of Vick Road north of the entrance. To ensure the safety of residents entering and exiting the site as well as northbound and southbound traffic traveling on Vick Road, a condition of approval has been placed on the plan, requiring the developer and future property owner to trim back the trees and shrubs located in the City’s right-of-way on the east side of the road, approximately 280 feet north of the site entrance.

TRANSPORTATION: A Traffic Impact Analysis (TIA) was submitted for this project that assessed the impacts on the transportation facilities within one mile of the site. The project is anticipated to generate 384 Daily trips and 26 PM Peak Hour net new trips. The following roadway segments were analyzed for capacity in the study: Welch Road from Vick Road to Rock Springs Road; Lester Road from Vick Road to Rock Springs Road and Vick Road to Schopke Lester Road; and Vick Road from Old Dixie Highway to Martin Street, Martin Street to Welch Road, Welch Road to Lake Francis Drive, Lake Francis Drive to Lester Road, and Lester Road to Ponkan Road. The roadway segment analysis demonstrates sufficient capacity exists on both roadways to accommodate the addition of trips generated by this project.

The intersection of Vick Road and Welch Road was analyzed for existing and future conditions for the PM Peak Hour. The analysis shows that the intersection is currently operating satisfactorily and will continue to operate at satisfactory LOS in the projected conditions.

Warrants for left and right turn deceleration lanes on Vick Road at the Meadow View driveway were conducted to determine if auxiliary turn lanes are necessary to maintain the integrity of traffic flow and capacity of the road during the peak hours. Neither turn lanes were warranted; however, for safety purposes the applicant has agreed to install a left turn lane at the site entrance.

EXTERIOR ELEVATIONS: The height of the proposed two-story buildings is 31 feet, falling below the maximum allowable height of 35'. Staff finds the proposed building elevations meet the intent of the City's Development Design Guidelines.

STORMWATER: Stormwater will be captured and attenuated through an underground exfiltration system.

DEVELOPMENT CONDITONS: The applicant is required to trim back the trees and shrubs located in the City's right-of-way on the east side of Vick Road and ensure the future property owner maintains a clear line of site from the project entrance. Also, the applicant is required to install a left turn lane on Vick Road at the site entrance.

BUFFER/SCREENING/LANDSCAPING/TREE PROGRAM: The landscape buffers and site landscaping will be artfully arranged with Sabal Palms, Podocarpus Shrubs, Walter's Viburnum, Drift Rose, Gold mound Duranta, Dwarf Yaupon Holly, and Dwarf Asiatic Jasmine. All plant materials will be "Florida Friendly".

As part of the development plan approval, 22 Live Oaks, 24 Magnolias, 19 Red Cedars, 25 Crepe Myrtles, and 19 Eagleston Holly trees will be planted on the site. Tree mitigation is required for 469 inches dbh. The proposed Tree Bank payment is \$4,960.00 (496 inches X \$10.00/inch).

2. ____ Check each zone once per month to ensure there are no broken irrigation heads and that you have 100% coverage.
3. ____ Adjust each zone twice per year to ensure the correct spray pattern and to ensure impervious surfaces are not being watered.
4. ____ Set irrigation frequency to once per week during the months of December, January and February and twice per week the rest of the months. Make sure the day and time corresponds to the local water restrictions.
5. ____ Add mulch to landscape as needed to maintain 3-inches on all beds.
6. ____ Check rain sensor quarterly to make sure it is functioning.
7. ____ Calibrate irrigation zones once per year using flat-bottomed cans so that no more than ½-inch per application is applied in the high volume zone, no more than ¼-inch per application is applied in the medium volume zone, and no more than 1/8-inch per application is applied in the low volume zone. The above mentioned settings presume two watering days per week.
Note: Controller must be adjusted to keep the irrigation within the water restrictions time frame.
8. ____ If your system is equipped with a filter, check and/or clean the filter quarterly.

If someone other than the owner does the above checks, it is recommended they be a Licensed Irrigation Contractor and a member of the Florida Irrigation Society.

EXECUTIVE SUMMARY

This traffic analysis was performed to assess the impact of the proposed Meadow View Apartments. The site is located on the intersection of Vick Road and Welch Road in the City of Apopka. The property will include a total of 43 apartment units.

The analysis evaluated project impacts to roadway segments and intersections within the primary site's influence area and a preliminary access review. The results of the analysis as documented herein are summarized below:

- The proposed development will generate a new daily traffic volume of 384 vehicle trips, of which 26 will occur in the PM peak hour.
- Analysis of roadway segment capacity reveals that all study segments currently operate within their adopted capacity and are projected to continue to do so at project buildout.
- Analysis of the study intersections indicates that they currently operate at adequate LOS and are projected to continue to do so at project buildout.
- A review of the project driveway at Vick Road and the required turn lane treatments reveals that turn deceleration lanes on Vick Road are not warranted or necessary to serve the projected traffic.
- Queuing is not anticipated at the access driveway on Vick Road. The proposed left turn lane is approximately 170 feet long and is adequate to serve the projected left turns.
- ***The proposed development does not adversely impact traffic operations in the vicinity of the site.***

1.0 INTRODUCTION

This revised traffic analysis was performed to assess the impact of the proposed Meadow View Apartments located on the intersection of Vick Road and Welch Road in the City of Apopka. The property will include a total of 43 apartment units. **Figure 1** depicts the location of the project site and the surrounding roadway network. A preliminary site plan is provided in **Appendix A**.

The following analysis was conducted in accordance with the methodology submitted to the city, and which is included in **Appendix B**. The analysis considers the project's impacts on the following roadways and intersections, within the project's influence area:

Roadway Segments

- Welch Road
 - o Vick Road to Rock Spring Road
- Lester Road
 - o Rock Spring Road to Vick Road
 - o Vick Road to Schopke Lester Road
- Vick Road
 - o Old Dixie Highway to Martin Street
 - o Martin Street to Welch Road
 - o Welch Road to Lake Francis Drive
 - o Lake Francis Drive to Lester Road
 - o Lester Road to Ponkan Road

Intersections

- Vick Road & Welch Road
- Vick Road & Access

Data used in the analysis consisted of site plan/development information provided by the Project Engineers, PM peak hour traffic counts obtained by Traffic & Mobility Consultants LLC (TMC), road segment data obtained from the City of Apopka, seasonal data obtained from Florida Department of Transportations (FDOT).

2.0 EXISTING CONDITIONS ANALYSIS

2.1 Roadway Segment Capacity

Table 1 presents a summary of the existing conditions for the roadway segments examined in this study. Roadway segments were analyzed by comparing the existing Level of Service (LOS) for each roadway segment with the adopted LOS standard. Existing Daily, PM peak hour directional traffic volumes, capacities, and committed trips were obtained from the City of Apopka's *Encumbered Traffic Allocation Worksheets*, which are included in **Appendix C**.

Lester Rd to Ponkan Rd	2	E	14,000	11,980	191	12,171	D	720	277	NB/EB	18	295	C

The existing conditions analysis reveals that the study roadway segments currently operate at satisfactory LOS.

2.2 Intersection Capacity

An intersection analysis was conducted using the *Synchro Software* and the methods of the *2010 Highway Capacity Manual (HCM)*. The capacity analysis was performed using the existing intersection geometries and traffic volumes during the PM peak hour. Existing turning movement counts were obtained at the study intersections. The raw turning movement counts were conducted within the peak season. Therefore, a Seasonal Adjustment Factor was not applied to the counts based on the data obtained from the FDOT Traffic Online website. The raw intersection volume counts and seasonal factors are included in **Appendix D**.

The intersection volumes are displayed in **Figure 2**. A summary of the intersection capacity analysis is shown in **Table 2**. This analysis indicates that the study intersections currently operate at satisfactory LOS. Detailed analysis worksheets are included in **Appendix E**.

3.1 Trip Generation

Information published by the Institute of Transportation Engineers (ITE) in the *Trip Generation Manual, 9th Edition* was used to determine the trip generation of the proposed development as summarized in **Table 3**. Detailed trip generation sheets are included in **Appendix F**.

Table 3

Trip generation analysis based on ITE Trip Generation Manual, 9th Edition
Equation has been used to calculate the rate

The proposed development will generate 384 trips per day, of which 26 trips will occur during the PM peak hour.

3.2 Trip Distribution/Assignment

To assign the PM peak hour trips generated by the proposed development to the study roadways, a distribution pattern in the general vicinity of the project site was determined based on the OUATS model output included in **Appendix G** and modified to reflect the local network and prevailing traffic patterns. The proposed trip distribution pattern is provided in **Figure 3**.

4.0 PROJECTED CONDITIONS ANALYSIS

Projected traffic conditions at project buildout were analyzed for Daily and PM peak hour traffic. Buildout year for the project is 2018. The analyses were conducted for the projected background traffic volumes and project trips. Background traffic consists of existing traffic and committed trips from approved developments in the area, which were obtained from the City's *Encumbered Traffic Allocation Worksheets*.

4.1 Roadway Segment Capacity

The roadway segment analysis was performed by comparing the projected LOS of the roadway with the adopted LOS standard. This analysis is summarized in **Table 4**, which reveals that the segments will continue to operate at satisfactory LOS in the projected condition. The project's impact on the backlogged roadway segment is less than 2% of the roadway's current capacity.

4.2 Intersection Capacity

To assess the projected operating conditions at the study intersections, an intersection capacity analysis was conducted using projected traffic volumes and projected intersection configurations. The intersections were analyzed using the *Synchro Software*. Projected peak hour volumes were calculated by adding background traffic and project trips at the intersections. Background traffic is comprised of existing and committed traffic at the intersections. Committed trips were estimated by assigning the segment committed trips to the intersection turning movements. The projected PM peak intersection volumes are shown in **Figure 4**, and the intersection analysis is summarized in **Table 5**.

The analysis shows that the intersections will continue to operate at satisfactory LOS in the projected conditions. Detailed printouts of the analysis are included in **Appendix H**.

5.0 SITE ACCESS REVIEW

The site is proposed to be served by a full access driveway, located approximately 650 feet north east of the intersection of Vick Road and Welch Road. The following review evaluates the proposed access configuration and the warrants for deceleration lanes at the driveways.

Turn Lane Warrants

A review of warrants for left and right turn deceleration lanes on Vick Road at the Meadow View driveway was conducted to determine if auxiliary turn lanes are necessary to maintain the integrity of traffic flow and capacity of the road during the peak hours. The review was conducted based on the methodology of the National Cooperative Highway Research Program (NCHRP) Report 457. The results of the warrants are summarized in the charts below and the full output forms are included in **Appendix I**.

Left Turn Lane Warrant

Right Turn Lane Warrant

Based on this review, turn lanes are not required on Vick Road at the intersection of Vick Road and project access.

Left Turn Lane at Vick Road (NB)

Although a left turn lane is not warranted by volume, one is proposed to minimize the potential friction from the proposed full access driveway on Vick Road. The proposed left turn deceleration lane on Vick Road should be designed in accordance with the requirements of Index 301 of the *FDOT Design Standards* for a speed of 35 mph. A copy of FDOT Index 301 is included in **Appendix J**. The queue storage area is based on the Preparation Manual (PPM) formula for queue length storage.

$$\text{Queue Storage} = 2 \times 25 \times \# \text{ of Vehicles} / 60$$

The required turn lane length is as follows:

$$\text{Total Length} = \text{Deceleration Length} + \text{Storage}$$

Deceleration @ 35 mph = 145 feet (incl. 50-foot taper)

$$\text{Queue} = 2 \times 25 \times \# \text{ of Vehicles} / 60$$

$$= 2 \times 25 \times 13 \text{ Vehicles} / 60$$

$$= 11 \text{ feet (use 25 minimum)}$$

$$\text{Total} = 145 + 25 = 170 \text{ feet (include 50-foot taper)}$$

The proposed left turn lane is approximately 170 feet which is adequate to serve the projected left turns into the site.

6.0 STUDY CONCLUSIONS

This traffic analysis was performed to assess the impact of the proposed Meadow View Apartments. The site is located on the intersection of Vick Road and Welch Road in the City of Apopka. The property will include a total of 43 apartment units.

The analysis evaluated project impacts to roadway segments and intersections within the primary site's influence area and a preliminary access review. The results of the analysis as documented herein are summarized below:

- The proposed development will generate a new daily traffic volume of 384 vehicle trips, of which 26 will occur in the PM peak hour.
- Analysis of roadway segment capacity reveals that all study segments currently operate within their adopted capacity and are projected to continue to do so at project buildout.
- Analysis of the study intersections indicates that they currently operate at adequate LOS and are projected to continue to do so at project buildout.
- A review of the project driveway at Vick Road and the required turn lane treatments reveals that turn deceleration lanes on Vick Road are not warranted or necessary to serve the projected traffic.
- Queuing is not anticipated at the access driveway on Vick Road. The proposed left turn lane is approximately 170 feet long and is adequate to serve the projected left turns.
- ***The proposed development does not adversely impact traffic operations in the vicinity of the site.***

DESIGN NOTES

- Basis for turn lane configurations:
 - Informed Driver.
 - Stop condition (With Or Without Stop Control).
 - Wet Pavement.
 - Reaction preceding entry point.
 - Minimum braking distance for urban conditions.
 - 75' min. for L_2 .
 - Comfortable deceleration rates for rural conditions (AASHTO 2001 threshold rate of 11.2 ft./s²).

GENERAL NOTES

- The plan views shown are for turn lane taper shapes and dimensional purposes only, they do not prescribe the use of curb, curb and gutter, shoulders nor separators specifically to either rural or urban conditions.
- Total deceleration distances must not be reduced except where lesser values are imposed by unrelocatable control points.
- Right turn lane tapers and distances identical to left turn lanes under stop control conditions. Right turn lane tapers and/or distances are site specific under free flow or yield conditions.
- These left turn configurations apply to continuous left turn lanes only where specifically called for in the plans.
- For pavement markings see Index No. 17346.

For Curb And Curb & Gutter Types, See Index No. 300

* Option 1 Separators Shown (Refer To Index No. 302)

MEDIAN CURB AND TRAFFIC SEPARATOR JUNCTURE DETAILS

- Δ The length of taper may be increased to L_1 for single left turns and L_2 for double left turns when:
- Left turn queue vehicles are adequately provided for within the design queue length.
 - Through vehicle queues will not block access to left turn lane.
 - Approved by District Design Engineer.

PROJECT SUMMARY: This is a request to approve the Sterling Title Redevelopment Final Development Plan that includes conversion of an existing residential structure with 1,337 square feet. A preliminary development plan is not required for development proposing less than 10,000 square feet of building floor area. No square footage will be added to the existing building, which is being converted from residential use to commercial use. No existing canopy trees are proposed to be removed. This project has been determined as a redevelopment plan based on Section 6.07(A) Hardship Waiver of the Land Development Code (LDC) as it meets the following criteria:

1. Existing structure ten years of age or greater.
2. The proposed improvements enhance the economic value of the property.
3. The proposed improvements enhance the esthetics of the project site.
4. The developer/owner demonstrates to the satisfaction of the Development Review Committee (DRC) the proposed improvements would not adversely impact any surrounding properties.
5. Proposed improvements are less than 50 percent of the value of the property improvements.

PARKING/ACCESS/TRANSPORTATION: Per LDC parking requirements, 5 parking spaces are required and being proposed, one of which is reserved as a handicapped accessible space. As a redevelopment, the applicant is requesting to reduce the required minimum length of a tandem parking space from 18-feet to 16-feet.

The site will have ingress and egress via Highland Avenue. Due to the area restrictions of the site, the applicant is requesting to reduce the required minimum width of a one-way drive aisle from 18-feet to 11-feet, as well as, a request to reduce the required minimum width of a two-way internal drive aisle from 24-feet to 16-feet.

According to LDC Section 6.07(C), adjustments to requirements, parking. The DRC may, in accordance with this site plan application, authorize parking requirements upon demonstration by the developer that the characteristics of the proposed use required a greater or lesser number of parking spaces than that required or proposed.

STORMWATER: The stormwater management system includes an on-site retention area, on the eastern portion of the project site. The stormwater pond design meets the City’s Land Development Code requirements.

LANDSCAPING/BUFFER/TREE PROGRAM: As part of the redevelopment plan approval, four specimen oak trees ranging from 24 inches to 48 inches in diameter at breast height (DBH) will be preserved. A row of Japanese Holly trees will be added to the south façade of the building. Red Bud, King Sago and Crape Myrtle trees will be planted to embellish the entrance and driveway. As no trees will be removed, there is no arbor mitigation fee is due based on the following arbor assessment.

Arbor Assessment

Total inches on-site (before removal):	124
Total specimen inches removed	0
Total inches retained:	124
Total inches added:	3
Total inches post development:	127

CONTRACTOR SHALL MAINTAIN SUCH AREAS UNTIL FINAL ACCEPTANCE BY OWNER. CONTRACTOR TO COORDINATE WITH OWNER REGARDING TYPE OF MATERIAL, LANDSCAPING AND IRRIGATION REQUIREMENTS.

EROSION AND SILTATION CONTROL:

1. GENERAL - ALL EROSION AND SILTATION CONTROL METHODS SHALL BE IMPLEMENTED PRIOR TO THE START OF CONSTRUCTION. DURING CONSTRUCTION, DENuded AREAS SHALL BE COVERED BY MULCHES SUCH AS STRAW, HAY AND FILTER FABRIC. ALL STORM SEWER INLETS IN THE VICINITY OF THE PROJECT SHALL BE PROTECTED BY SEDIMENT TRAPS OR HAY BALES. THESE SHALL BE MAINTAINED AND MODIFIED DURING THE CONSTRUCTION PROCESS TO MINIMIZE DOWNSTREAM SILTATION. WHEN CONSTRUCTION IS COMPLETED, DETENTION AREAS WILL BE RESHAPED, CLEANED OF SILT, MUD AND DEBRIS, AND RE-SODDED TO PROPERLY DETAIN THE INTENDED STORM QUANTITIES.

2. PROTECTION AND STABILIZATION OF ON-SITE SOIL STOCKPILES - FILL MATERIAL STOCKPILES SHALL BE PROTECTED AT ALL TIMES BY ON-SITE DRAINAGE CONTROLS WHICH PREVENT EROSION OF THE STOCKPILED MATERIAL. CONTROL OF DUST FROM SUCH STOCKPILES MAY BE REQUIRED, DEPENDING UPON THEIR LOCATION AND THE EXPECTED LENGTH OF TIME THE STOCKPILES WILL BE PRESENT. IN NO CASE SHALL ANY UNSTOCKPILED MATERIAL REMAIN MORE THAN THIRTY (30) CALENDAR DAYS AFTER SUBSTANTIAL PROJECT COMPLETION.

3. PROTECTION OF EXISTING STORM SEWER SYSTEMS: DURING CONSTRUCTION, ALL STORM SEWER INLETS IN THE VICINITY OF THE PROJECT SHALL BE PROTECTED BY SEDIMENT TRAPS SUCH AS SECURED HAY BALES, SOD, STONE, ETC., WHICH SHALL BE MAINTAINED AND MODIFIED AS REQUIRED BY CONSTRUCTION PROGRESS, AND WHICH MUST BE APPROVED BY THE ENGINEER BEFORE INSTALLATION.

4. SEDIMENT BASINS AND TRAPS, SEDIMENT TRAPPING MEASURES: PERIMETER BERMS, SEDIMENT BARRIERS, VEGETATIVE BUFFERS AND OTHER MEASURES INTENDED TO TRAP SEDIMENT AND/OR PREVENT THE TRANSPORT OF SEDIMENT ONTO ADJACENT PROPERTIES, OR INTO EXISTING BODIES OF, MUST BE INSTALLED, CONSTRUCTED OR, IN THE CASE OF VEGETATIVE BUFFERS, PROVIDED FROM DISTURBANCE, AS A FIRST STEP IN THE LAND ALTERATION PROCESS. SUCH SYSTEMS SHALL BE FULLY OPERATIVE BEFORE ANY OTHER DISTURBANCE OF THE SITE BEGINS. EARTHEN STRUCTURES INCLUDING BUT NOT LIMITED TO BERMS, EARTH BARRIERS, DAMS OR FIELDS SHALL BE STABILIZED AND PROTECTED FROM DRAINAGE DAMAGE OR EROSION WITHIN ONE WEEK OF INSTALLATION.

5. ALL SWALES, DITCHES AND CHANNELS, CHANNELS LEADING FROM THE SITE SHALL BE SODDED WITH ARGENTINE BAHIA WITHIN THREE (3) DAYS OF EXCAVATION.

6. THE CONSTRUCTION OF UNDERGROUND UTILITY CONSTRUCTION: UNDERGROUND UTILITY LINES AND OTHER STRUCTURES SHALL BE DONE IN ACCORDANCE WITH THE FOLLOWING STANDARDS:

A. NO MORE THAN 500 LINEAR FEET OF TRENCH SHALL BE OPEN AT ANY ONE TIME; B. WHEREVER CONSISTENT WITH SAFETY AND SPACE CONSIDERATION, EXCAVATED MATERIAL SHALL BE CAST TO THE UPHILL SIDE OF TRENCHES. TRENCH MATERIAL SHALL NOT BE CAST INTO OR ONTO THE SLOPE OF ANY STREAM, CHANNEL, ROAD, DITCH OR WATERWAY.

7. ALL EROSION AND SILTATION CONTROL DEVICES SHALL BE CHECKED REGULARLY, ESPECIALLY AFTER EACH RAINFALL AND WILL BE CLEANED OUT AND/OR REPAIRED AS REQUIRED.

DEWATERING NOTES:

1. DURING THE EXCAVATION OF THE STORMWATER PONDS, THE CONTRACTOR MUST CONSTRUCT A SEDIMENT BASIN TO PROVIDE A DISCHARGE POINT FOR DEWATERING. THE SEDIMENT BASIN CAN BE CELL IN THE PROPOSED EXCAVATION AREA OF A POND OR IT CAN BE A BERMED AREA ABOVE GROUND. ALL DEWATERING MUST BE HELD IN THE SEDIMENT AREA UNTIL THE WATER IS CLEAN SUCH THAT THERE WOULD BE NO TURBID DISCHARGE. AFTER THE WATER IN THE SEDIMENT BASIN IS CLEAN, THE WATER MAY BE RELEASED INTO THE ON-SITE POND PROVIDED THERE IS NO ADVERSE IMPACT TO THE EXISTING WATER QUALITY.

2. UNDER NO CIRCUMSTANCES WILL THE DISCHARGE FROM THE DEWATERING BE DIRECTLY INTO THE CANAL (NOTE OMITTED)

3. DURING THE EXCAVATION THE CONTRACTOR SHALL NOT PENETRATE THE EXISTING CLAY LAYER. IF THE CONTRACTOR ENCOUNTERS THE CLAY LAYER, HE/SHE IS TO PLACE A MINIMUM OF 2 FEET OF SANDY MATERIAL OVER THE CLAY AND TERMINATE THE DEPTH OF THE EXCAVATION.

4. IF CONTRACTOR ENCOUNTERS SILTY/CLAY SAND, WHICH CAUSE THE WATER TO BECOME TURBID, HE/SHE SHALL TREAT THE SEDIMENT BASIN WITH CHEMICAL ADDITIVE SUCH AS ALUMIN IN ORDER TO PROMOTE THE COAGULATION OF THE PARTICLES WHICH ALLOW THE TO SETTLE AND THE WATER TO BECOME LESS TURBID. IF TURBID WATER ENCOUNTERED DURING EXCAVATION OF THE PONDS, THE CONTRACTOR SHALL NOTIFY THE ENGINEER OF RECORD IMMEDIATELY TO DETERMINE THE COURSE OF ACTION THAT IS APPROPRIATE TO ELIMINATE THE TURBIDITY AND ALLOW DISCHARGE THAT MEET WATER QUALITY STANDARDS.

5. THE CONTRACTOR SHALL SEQUENCE THE EXCAVATION OF THE STORMWATER PONDS SUCH THAT A SEDIMENT BASIN WILL BE AVAILABLE AT ALL TIMES. THE SEDIMENT BASIN CAN BE RELOCATED AS NECESSARY SUBJECT TO THE WATER WITHIN THE SEDIMENT BASIN BEING NON-TURBID AND ACCEPTABLE FOR DISCHARGE OFF-SITE.
